

metanous

We deliver advanced and scalable IoT implementations for ambitious enterprises

With Azure IoT, you can easily connect, monitor, and manage your IoT devices, allowing you to focus on creating innovative solutions for your business. We provide the insights, advice, knowledge and development for your IoT platform.

IP ownership

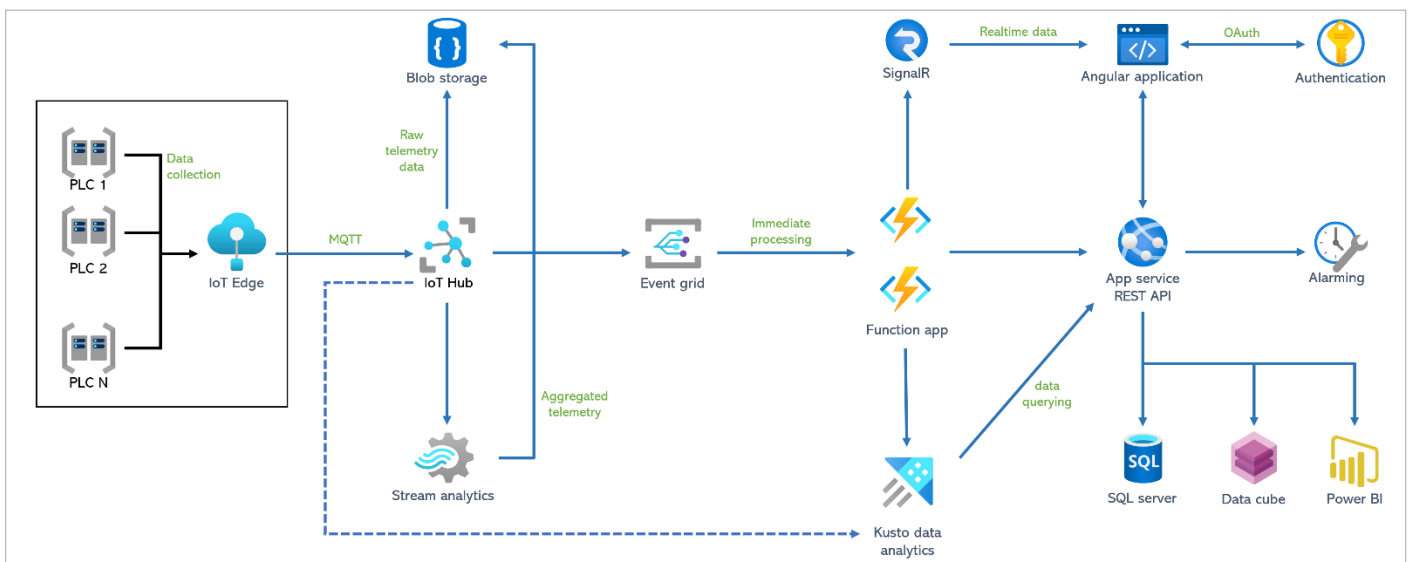

A custom IoT platform provides full ownership and control of the IoT platform. The platform is a differentiator for your product and service and will allow you to strengthen your market position.

Customization

Our software development and IoT skills allow to create innovative solutions in line with your business needs. Unique features and algorithms to create extra value for your product or service.

Roadmap

Full control over the platform roadmap allowing innovation and timely implementation of new features, supporting your product roadmap and business activities.

Integrations

We offer IoT solutions that are designed to support easy and secure integration. The platform is providing reliable and robust connectivity and data security for your global IoT deployment.

Cost optimization

No license costs are involved and the platform allows unlimited number of users. The operational cost is furthermore optimized using data transfer and data processing reduction techniques

Data ownership

You own the data and have full control on data retention. Apart from gathering and managing your data, we will work with your team to analyze the data and turn that information into business opportunities.
